INTRODUCTION

The NASA Science Mission Directorate (SMD) Science Activation (SciAct) program connects NASA Science with diverse learners of all ages in ways that activate their minds and promote a deeper understanding of our world and beyond, with the ultimate Vision:

To increase learners’ active participation in the advancement of human knowledge.

This report summarizes the SciAct program approach, provides a snapshot of the program’s 2021 impacts, and illustrates how this $46M program creates impact and value that far exceed its annual expenditures, improving coordination across NASA Science Mission activities and allowing for the increasingly efficient, effective, and sustainable use of SMD Science discoveries and experts for engaging learners.
There are many organizations and programs that aim to inspire a passion for STEM in learners, with the hope that they will eventually pursue future careers in science and technology, but according to research conducted by Kania and Kramer (2011), a single institution is rarely capable of single-handedly facilitating the entire pathway from learning to career opportunities. However, coordinating across many organizations using a “collective impact” approach can help interlink individual programs in a way that is more likely to create pathways to opportunities for learners.
Since its inception in 2016, the SciAct program has adopted this kind of collective impact, network-of-networks approach. SciAct serves as the “backbone organization” that supports, leads, and coordinates collaboration across a cooperative, nationwide network of competitively selected teams. These teams, made up of community-based learning providers, educators, and experts, work together across a shared set of NASA values and SciAct group norms to connect diverse learners of all ages with NASA Science experts, exciting NASA content, and authentic science experiences. It is through value-based decision making, intentional and independent evaluation, efficient coordination of mutually reinforcing activities, and open and continuous communication that SciAct helps create learner pathways to STEM careers.

SciAct models value-based decision making. This has been critical to success during the 2017 Total Solar Eclipse, pandemic, and adapting to community needs.

We Reach and Engage Learners Across the Nation and Beyond

As shown in the 2020 reach map on page 4, the Science Activation project teams reach and engage learners in all 50 states, Washington DC, and 4 US Territories (PR, USVI, Guam, American Samoa). In 2020 alone, SciAct facilitated 22 million learner interactions in the United States.

23,000,000 learners reached worldwide!
112 countries, 22 million in the U.S.

72 peer-reviewed publications developed and distributed to science centers and museums

350 hands-on toolkits ensure accurate and timely science content

421 subject matter experts including 1100 volunteers hosting over 50,000 events since 2016

43 teams
We Leverage Partnerships and Collaboration

SciAct achieves its impressive reach and engagement goals in two primary ways. First, the program leverages partnerships and cross-collaborations within the program to ensure project teams benefit from each other’s assets and expertise as well as that of existing NASA infrastructure teams. This reduces any duplication of effort and promotes efficiency while putting great minds together to accomplish shared goals. In addition, project teams engage in strategic partnerships with community-based and audience-based organizations outside the SciAct program to support existing institutional, state, and local efforts. Leveraging partnerships and collaborating both internally and externally amplifies SciAct’s impact for learners across the Nation.

NASA SciAct supports dynamic and deep collaborations among and across SciAct project teams (shown in orange text) and infrastructure teams (shown in blue text). In 2021, there were 91 collaborations across 41 teams. These cross-collaborations extend the reach and impact of projects across the portfolio.
The SciAct program efficiently extends its reach through strategic partnerships with community-based and audience-focused organizations that support institutional, state, and local efforts. Each awardee selects and develops those relationships that help them best achieve their objectives and meet the needs of diverse learners. Since the beginning of the SciAct program in 2016, these partnerships have increased by 20%, with the teams having worked with over 268 active external partners in 2021.

We Inspire
Learners and Scientists

NASA and NASA-funded scientists work with Science Activation, both behind the scenes and interacting directly with learners, to share the story and adventure behind NASA Science. Throughout 2021, more than 400 subject matter experts participated in and helped produce compelling, innovative, and accurate Science Activation events and products—giving learners the opportunity to learn from and work hand-in-hand with real scientists in inspiring and engaging ways.
We Innovate
Evidence-based Learning Solutions

Since SciAct began, our teams have published 81 peer-reviewed papers documenting evidence-based solutions for reaching and motivating learners of all ages so that others can benefit from our lessons learned. To date, these publications have been cited at least 433 times and the portfolio has an h-index of 12.

To explore the range of SciAct peer-reviewed publications, visit: https://science.nasa.gov/learners/publications.

We Empower
Broadening Participation

Diversity, equity, inclusion, and accessibility (DEIA) are critical values that underscore SciAct’s commitment to broadening participation. With over half of its portfolio focused directly on broadening participation as its primary goal (and the other half with broadening participation-focused aspects), SciAct supports NASA’s 2020–2024 Vision for Scientific Excellence Priority 4 Strategy to “increase the diversity of thought and backgrounds represented across the entire Science Mission Directorate portfolio through a more inclusive environment.” The entire SciAct portfolio aims to better serve groups historically underrepresented in STEM fields by delivering activities and experiences to learners of many backgrounds and leveraging scientist-educator partnerships that demonstrate diverse, broad, and deep national education and communications impacts. SciAct is bringing new learners into the process of science via projects...
and activities specifically designed to support multilingual, indigenous, rural, immigrant, refugee, disabled, and other disadvantaged, under-served, and under-represented communities, which also closely aligns with our national agenda for STEM education in its priority to increase diversity, equity, and inclusion in STEM.

The AREN Project introduces learners of all ages to the world of NASA remote sensing through novel NASA technologies, science, and operations concepts. Low-cost instrumented kite-borne platforms, called Aeropods, allow learners to conduct local-scale remote sensing missions and to collect remote in-situ measurements of atmospheric phenomena. Instrumented remote controlled watercraft called AquaROVERs are used to conduct water quality investigations remote from shore, and instrumented remote controlled TerraROVERs, allow users to conduct measurements of surface conditions in terrestrial environments.

---

**AUDIENCE QUOTE:** “I used the manual image classification exercise you provided. ... They are doing a great job of working together and helping each other understand, while completing individual projects that preclude copying. It’s been a fun way to expose them to the real-world use of geometry and science, and is much less stressful for them than a comprehensive final exam. Thanks so much for being such wonderful resources for me and my classes. We appreciate you!”

—Teacher, Henryville, IN
Key 2021 Accomplishments

- Collaborative launch of the TerraROVER platform with GLOBE Mission Earth in support of Surface Temperature/Urban Heat Island Campaign
- Launch of first AREN Summer Institute (virtual) featuring extended Professional Development model and geographically distributed educator cohort; will continue throughout the year
- Onboarding of new team members
- Initiated several programs with new partner schools
- Upward Bound at UMES — now collaborating with UC Boulder program
- Camp AREN at USF
- Inclusivity Camp at MSU
- Collaborated with GME and Arctic Earth & SiGNS on Broadening Participation in Engineering group
- Supporting program at Northwest Indian College (NWIC) focusing on tribal energy sovereignty

Key Partners Active in 2021

SciAct Collaborative Partners
- GLOBE
- Arctic Earth and SiGNS
- GLOBE Mission Earth

University Partners (External)
- Northwest Indian College (WA)
- Oklahoma State University (OK)
Science Activation

**Airborne Astronomy Ambassadors (AAA)**

The Airborne Astronomy Ambassadors (AAA) project aims to measurably enhance student STEM learning & engagement in selected school districts and community colleges via professional development for science teachers, including participation in science flights on NASA’s Stratospheric Observatory for Infrared Astronomy (SOFIA).

**Audience Quote:** “Participating in AAA changed the trajectory of my life, professionally and personally. Because of my AAA experience, I eventually took a full-time STEAM administrator position in a charter school network, developing & leading aerospace projects. The ripple effect continues, with more than 1,500 students immersed in introductory aeronautics, 2,500 delving into microgravity experiments, and 9 student-authored experiments conducted on the ISS. In my leadership role I’m now encouraging other teachers to apply to be Airborne Astronomy Ambassadors.”

—Kathleen Fredette
Key 2021 Accomplishments

- Cycle 9 (2021) cohort of 30 educators (14 middle school, 8 high school, and 8 community college) from 10 states were selected by peer panel review of applications. This was the 1st year in which middle school and community college teachers were eligible to apply.

- Brief window of opportunity during June & July allowed 13 Cycles 7 & 8 teachers to have their STEM immersion experiences including SOFIA flights.

- Added a new project component, Astronomy Academy, providing access to NASA subject matter experts & resources for a wider set of teachers than those on track to be Airborne Astronomy Ambassadors. The Astronomy Academy component was pilot tested in the Cobb County (Georgia) and Ft. Zumwalt (Missouri) school districts.

- A 4th edition of the SOFIA Science Case Studies student Reader was produced and delivered to Cycle 9 teachers for distribution to their students as a key component of the AAA electromagnetic spectrum and infrared astronomy curriculum; translation consultant produced a Spanish version.

2021 Partners

- SOFIA mission
- 62 schools & colleges in 13 states

American Museum of Natural History: Open Space

OpenSpace is open source, interactive data visualization software that enables exploration of the known universe and portrays our ongoing efforts to explore space. The project team is working to expand the number of informal science institutions using OpenSpace to engage their audiences and collaborating with NASA SMEs to incorporate new satellite, mission, and simulation data into the software.

“AUDIENCE QUOTE: “[The best part of OpenSpace was] seeing how the huge amount of data can be compiled into an image of the world that we can fly around and zoom into.”
**Key 2021 Accomplishments**

- Released 3 major and 2 minor updates of OpenSpace software
- Engaged 25 NASA SMEs in public programming, formal education settings, research capacity, and to collaborate on software development
- 12 new users successfully installed and/or using OpenSpace
- 206 public programs and 4 exhibits reached 149,300 on-site and 305,200 online

**Funded Partners**

- Adler Planetarium
- California Academy of Sciences
- Denver Museum of Nature & Science
- Houston Museum of Natural Science

**AUDIENCE AGE:** 
All Ages

**LEARNING CONTEXTS**
- Digital Learning
- Neighborhood/Community
- Informal/Out of School
- Home/Family
- Citizen Science
- Formal Education

Educators, community members, and youth are engaged in STEM, climate learning and action through multiple knowledge systems, interdisciplinary approaches, and, Indigenous, GLOBE and NASA, science and resources.

---

**EDUCATOR QUOTE:** “This project meets my needs by ‘the acceptance and inclusion of all voices in the discourse about science, climate and indigenous knowledge... I am inspired, refreshed, newly energized!’”

—L.J.
Key 2021 Accomplishments

- **Conducted** online courses, training and follow-up support for educators and community members including families
- **Piloted** teacher and parent user friendly curricular materials i.e., Learning from K’keeeyh (Birch) and GLOBE Grandma
- **Hosted** three summer youth camps
- **Expanded** the Climate Research Intensive for first generation college students to 3 locations
- **Tested** with educators, the co-developed rubric for reviewing the Learning from K’keeeyh curriculum
- **Applied** AE SIGNs learning model to new projects

**Key Partners**

- Association of Interior Native Educators
- GLOBE
- NASA Langley Research Center
- Renewable Energy of Alaska Program
- Santa Ana Community College-MESA
- UAF Climate Scholars’ Program
- UAF 365 Smart Academy

**Cosmic Storytelling with NASA Data**

The world is fast-becoming a place driven by data. To address dire shortages of data competency in the workforce, industry leaders are urgently calling for educational pathways that teach people how to engage with data. The Cosmic Data Stories (CosmicDS) team will facilitate the development of online resources that will teach people how to interact with and learn from data, through “data stories” told by NASA astronomers.

**Contributors**

**Audience Age**

14+

**Learning Contexts**

- Digital Learning
- Informal/Out of School
- Formal Education

**Languages**

- Jupyter Notebook 85.2%
- CSS 10.9%
- Python 1.9%
- Vue 1.7%
- Jinja 0.3%

**Educator Quote:**

“The emphasis on truly understanding uncertainties puts this above the usual cut of Hubble Law labs. That’s not where non-science major labs usually go.”

—Astronomy 101 Educator

“The design of this lab allows students to take ownership of their measurements and data, which will help them feel invested in what they’re doing”

—High School Educator
Key 2021 Accomplishments

- Built software infrastructure for Cosmic Data Stories, integrating key functionality of glupyter and WorldWide Telescope into web interface that can be customized by the user-experience/design team
- Prototype Hubble Data Story under development—see screenshots below
- Engaged high school and college educators to provide feedback on prototype, and to pilot test in early 2022
- Recruited SMEs with expertise in extragalactic astronomy to help assemble required galaxy data for Hubble prototype and to vet scientific accuracy of content

Key Partners

- Smithsonian Astrophysical Observatory
- SMEs in UCLA Department of Astronomy
- NASA Community College Network
- Local high school teachers in the Greater Boston Area

TOP: Students will make their own measurements of galaxy velocity and distance based on spectra and image data from the Sloan Digital Sky Survey.

MIDDLE: Students will use their measurements for 5 galaxies to estimate the age of the universe using the Hubble Law (blue), and then aggregate all galaxy measurements from their class to obtain a new age estimate (orange).

BOTTOM: By comparing the distribution of age estimates for individual students vs. entire classes, students can understand how including more data can reduce random uncertainties in scientific measurements.

Students’ use of real data to answer a significant question (e.g., how old is the universe?) will be situated within a story that sets their measurements in historical and modern scientific context.
Science Activation

**Eclipse Soundscapes: Citizen Science Project**

The Eclipse Soundscapes: Citizen Science project (ES:CSP) will create an authentic learning experience that utilizes Subject Matter Experts and evidence-based practices to increase the understanding of the scientific process and address accessibility challenges, specifically those experienced by people who are Blind or Low-Vision (BLV). ES:CSP will answer scientific questions about the impact of the 2017, 2023, and 2024 solar eclipses on U.S. ecosystems using soundscapes.

---

**Advancing National Educational Goals**

**Engaging participants in inclusive learning experiences that promote accessibility skill development for STEM careers**

**Diversity of Thought Discussion:** How can physics be more accessible?
- Male (54%); White (65%); BA degree (50%); English fluency (100%); No disability (85%); Undergrad (62%), Physics (69%)

**A Learner-Centered “real world” UX/UI Accessibility Project**
- Female (90%); Asian (60%); 18-25 years old (90%); < 1 year academic UX/UI experience (69%); no professional UX/UI experience (70%)

- **Increased interest in learning how to make STEM more accessible**
- **Greater ability to implement accessible design into their process.**

- **Increased knowledge on how to make STEM more accessible**
- **Improved Understanding of accessibility UX/UI laws & guidelines**

American University Physics Colloquium, Oct 2021
New York University, Spring 2021 Semester

**Audience Age:**

11+

---

**Learning Contexts**

**Citizen Science**
Key 2021 Accomplishments

- ES:CSP infrastructure developed to collaborate with NASA SMEs, Soundscapes SMEs, accessibility partners, educators, developers, & citizen science community
- Increased Accessibility Awareness/Knowledge in future STEM workforce; Collaborated with NYU as a “Real World Client” so students could support the development of an accessible citizen science user interface (UX/UI)
- Accessible Citizen Science Kit prototype
- SME-supported ES:CSP Science Investigation Plan
- Data analysis tools made public to ensure accessibility capabilities: Collaborated with Rainforest Connection to integrate analysis systems with their API and make the APIs public so that an accessible layer can be designed in 2022 that will work with already existing audio database and analysis tools
- Iterative Design and Assessment Framework lead to deeper understanding of accessibility challenges that must be addressed to make UX/UI effective AND accessible.

Key Partners

- GBH National Center for Accessible Media (NCAM)
- Regine Gilbert of New York university (NYU)
- National Federation of the Blind (NFB)

The inexpensive AudioMoth science data recorder made accessible by adding “bump dots” which are used in the BLV community to provide tactile cues.

Grasshopper sitting on a blade of grass against the background of the sun. It is expected that soundscape changes that occur during eclipses will be primarily demonstrated by insect species.

BLV Consultant conducting accessibility review of ES:CSP Citizen Science Kit prototype. Utilizing an iterative design process that considers accessibility from the start is crucial in ensuring that the kits are accessible and engaging.

**GLOBE Mission EARTH (GME)**

Fusing GLOBE with NASA assets to build systematic innovation in STEM

**GLOBE Mission EARTH** is a collaborative of multiple institutions across the United States formed to increase involvement in the GLOBE Program ([www.globe.gov](http://www.globe.gov)) and to incorporate NASA assets into student learning. Our focus is on disadvantaged student populations of all ages. Partners include:

- **NASA Langley Research Center (LaRC)**, Hampton, VA;
- **Boston University (BU)**, Boston, MA;
- **Tennessee State University (TSU)**, Nashville, TN;
- **Palmyra Cove Research Facility**, Palmyra, NJ; and
- **WestEd/University of California at Berkeley (UCB)**, Berkeley, CA. GLOBE Mission EARTH is funded by NASA Cooperative Agreement Notice (CAN) #: NNX16AC54A.

**PI:** Dr. Kevin Czajkowski

**INSTITUTION:** University of Toledo, OH

https://www.globe.gov/web/mission-earth

**AUDIENCE AGE:**

All Ages

| 0 | 5 | 11 | 14 | 19 | 23 | 27 | 99 |

**LEARNING CONTEXTS**

- Digital Learning
- Neighborhood/Community
- Informal/Out of School
- Citizen Science
- Formal Education

Partnerships established at the local, regional and national level.

169 Subject Matter Experts presented to students in person or virtually (for UT, BU and WestEd UC Berkeley). 50 SMEs (for UT and WestEd UC Berkeley) provided feedback to students’ projects in 2021.

274 students used GLOBE protocols and collected data. 179 of these students worked on GLOBE projects.

426 teachers joined the PD sessions, brought GME in their classrooms and provided all the evaluation feedback. 153 schools have participated. 55 PD sessions have been offered. 619 of the 426 teachers received PD from the LaRC team in 2021 (in GLOBE Elementary), as affiliate teachers.

**AUDIENCE QUOTE:** “This project meets my needs by [helping me with] “data collection, sharing data with other places, understanding that kids, people all over the world, are doing similar science.”

—Marcy Burns, 5/6th Grade Teacher, Norwalk, Ohio
Key 2021 Accomplishments

- Over 4,100 K–12 Students involved; 70 Student Research Projects completed
- 99 Undergraduate Students involved
- 62 Teachers attended UT/BU/WestEd Professional Development (PD)
- 69 Teachers attended NASA LaRC PD in Elementary GLOBE
- 21 Subject Matter Experts (SMEs) connected to classrooms
- Multiple Virtual Science Symposia, Online Trainings and Events

Learning Ecosystems Northeast

Learning Ecosystems Northeast (previously Real World, Real Science) is creating Connected Learning Ecosystems across Maine and the Northeast focused on supporting informal and formal educators to create linked NASA-powered explorations of local climate change impacts and thereby lift youth STEM interest and agency.

**Audience Quote:** “My head is so full right now! SO GLAD WE EXPANDED TO INFORMAL EDUCATORS. I will connect with Laura on revamped Project Wild and with Rebecca on Weatherblur. We’ll be investigating Blue Hill Peninsula for invasive species, water quality, and climate change.”

—Nell Hermann, Blue Hill Consolidated School
Key 2021 Accomplishments

- Launched 6 Connected Learning Ecosystems in rural Maine. 4 evolved from prior network of Teacher Communities. 2 added anew, including 1 serving Tribal communities.
- Data-rich climate learning experiences offered by GMRI, Maine 4H, Maine State Library
- GMRI, Wabanaki Youth in Science, and Maine Indian Education are developing model for data-rich ecosystem investigations that start from Indigenous cultural knowledge.
- GMRI and Gateway Community Services are developing data-rich climate learning experiences for their Color of Climate youth, extending that group from high school to middle school, and planning CLE launch for immigrant/refugee communities of Portland and Lewiston for early 2022.
- GMRI and Maine State Library are planning for Summer 2022 Summer Reading theme of Oceans!
- LabVenture reopened for in-person student visits with full schedule for the 2021–2022 school year.

LEARNING CONTEXTS
FORMAL EDUCATION
**Key 2021 Accomplishments**

- Successfully filled Pilot Year cohorts: 30 NASA Subject Matter Experts (SME) and 25 Community College Instructors (CCI)
- Guidance from Advisory Board consisting 8 experienced SMEs and CCIs
- Creation of searchable database with 50 curated audience-specific resources
- Presentation of professional development webinars for both SMEs and CCIs
- WestEd held usability interviews with CCIs, conducted PD webinar evaluation surveys, and contributed to development of database.
- NCCN website includes recruitment tools, participant services, resource database, professional development and collaboration opportunities.

NASA Earth Science Education Collaborative (NESEC)

Short Description: Enable broad participation in authentic NASA Earth STEM experiences for lifelong learners through three interconnected areas: Citizen Science (GLOBE Observers); Science Investigations with NASA; Strategic Partnerships and Collaborations.

NESEC contributes to SciAct’s vision: By 2026 to increase learners’ active participation in the advancement of knowledge.

Citizen Science Contributions
- 62K+ volunteer hours
- 212K+ GLOBE observers registered
- 744K+ observations (clouds, trees, land cover, mosquito habitats)
- 790K+ satellite images matched to cloud observations
- 1.56M+ photos submitted

Science Research and Investigations
- 20 peer-reviewed papers
- 1,300+ student research projects, by 6,400+ learners
- 650+ Girl Scout Troops plus 4,350 individual scouts
- 12 GLOBE Goes to Camp pilot sites with 2K+ campers
- 790K+ satellite images matched to cloud observations
- 1.56M+ photos submitted

SMEs
- >130 SMEs have participated in NESEC activities, ranging from partners to ad hoc engagement

Audience Quote: “This fall, I’ll be joining Colgate University. I’m going to be a minor in environmental studies because of my exposure through the GLOBE Trees program.”

—Macdonald Chirara, high school student, South Africa, 2021 NASA CitSciCon
Key 2021 Accomplishments

- **Participation in all 50 states**, with 1,000+ U.S. students participating in research projects
- **Social media** reached 6.85M+
- **Six new peer-reviewed papers** including three with student citizen scientists
- **GLOBE Observer updates** include major improvements to Mosquito Habitat Mapper tool, and new capabilities in early 2022 that will enable requests for GLOBE data collection in designated areas
- **Collaborations resulted in new resources and opportunities to support STEM Learning** (e.g., SEES Earth System Explorers virtual internship; GLOBE Mission Earth Pacing Guides; eClips Spotlite Video Challenge: Cloud Detectives; Shaw University pilot citizen science course for undergraduates; ISEF Earth System Science Award; SciStarter/Girl Scouts Think Like a Citizen Scientist Journey)
- **Two international data challenges** increased GLOBE data density: Trees and Mosquito Habitats/Land Cover.

NASA eClips 4D

NASA eClips increases STEM literacy through the lens of NASA by bringing together engaging standards-based videos and resources with educational best practices for the national K–12 formal and nonformal educational communities. NASA eClips introduces learners to STEM concepts and provides educators with engaging resources and tools to support teaching and learning.

**PI:** Shelley Spears

**INSTITUTION:** National Institute of Aerospace (NIA)

https://science.nasa.gov/science-activation-team/eclips

**AUDIENCE AGE**

5–18

**LEARNING CONTEXTS**

- Digital Learning
- Neighborhood/Community
- Informal/Out of School
- Home/Family
- Citizen Science
- Formal Education

NASA eClips website and YouTube—Nearly 13.7 million lifetime views!

**Points of Contact** (January – September 2021)

- 13 Outreach events reaching 241 learners and 138 educators
- 14 PD events with 268 educators

118,618 NASA eClips Website Views

638,979 NASA eClips YouTube Channel Views

**ACCESSIBILITY AND EQUITABLE OPPORTUNITIES**

"I feel extremely valued for my input and suggestions. As a special education teacher, I am able to offer a unique view on the videos/educational programs and how all students can access these. I am able to offer techniques on how to adapt materials so that all students can be involved to an appropriate level. Special education teachers are often overlooked as being knowledgeable or having significant input, so I feel honored that my feedback is valued and well-received."
Key 2021 Accomplishments

An inclusive model increases collaboration and incorporates educators and learners in the intentional design of videos and resources.

Integrating collaborations led to co-development of Spotlite Challenges with SciAct Partners.

Reach map

Joan Harper-Neely, STEM Specialist, films Portsmouth Public School teachers as they develop a Spotlite video confronting the misconception that “Mars is red because it is hot.”

A diverse group of educators on the NASA eClips Advisory Boards enables the team to:
- develop Spanish resources;
- interact with a more diverse learner audience;
- increase product accessibility; and
- increase national reach.
NASA Heliophysics Education Activation Team (HEAT)

NASA Heliophysics Education Activation Team (NASA HEAT) develops engaging educational programs about heliophysics in-person and virtually. From running successful, nationwide educational programming, such as handling NASA eclipse coordination, to smaller, community-centric projects, NASA HEAT’s varied members provide innovative, engaging programs to reach the nation.

Audience Quote:
“Thank you so much for the wonderful space science activity kits. They are very thoughtful and well made. Our families are going to be super engaged, curious, and excited to learn together. The imagine alien life and aurora bracelet are two of my favorites, and the planisphere, what a bonus!”

— Summer Programming Coordinator (on Aurora Packets sent out by UAF)
Key 2021 Accomplishments

• NASA HEAT began developing the Heliophysics Education Framework (HEF), which will be a resource for educators, parents, and other audiences to facilitate teaching fundamental heliophysics concepts at multiple levels, via NASA assets. These assets will be aligned with national education standards, which will be the foundation for the database.

• NASA HEAT began coordination for the 2023 and 2024 eclipses, including graphic and website development, organizational planning, and collaborations with the American Astronomical Society (AAS). They also assisted with coordinating the June 10, 2021 Annular Solar Eclipse, which included a webpage and fact sheet in Spanish and English and a live stream, viewed by over 600,000 people.

An example of AAPT’s Digi Kits, a hands-on, inquiry-driven activity that aligns with Science Education Framework and NGSS Standards. Note: Coronal Mass Ejections (CME)

On September 23, 2021, Dr. John Herrington shared with 450 viewers the Apollo program statistics before fascinating them with his personal journeys.

Student drawing of the Aurora–Sun connection and showing their Aurora bracelet that they made to better understand the colors of the aurora and how they correspond to the different gases.
Infiniscope creates NGSS-aligned, interactive, digital learning experiences featuring authentic NASA science, data, and subject matter experts for learners of all ages and cultivates a community of practice that empowers educators in the Earth and Space Science community.

“AUDIENCE QUOTE: “I am so happy to have found a place where I can connect directly with other educators and exchange ideas and inspiration using tools that will engage learners, wherever we educate.”

“I feel that the learning experiences I find in Infiniscope are so valuable. They are holistic, creative, and well designed. My students enjoyed participating in the activities.”
Key 2021 Accomplishments

- Infiniscope usage nearly doubled from 2020
- Transition to new technology base
- Developed a framework to guide CA digital curriculum program
- Production of 2 new experiences (Fate of the Plates and Tilt our World)
- Developed Tour It tool for easy creation of Virtual Tours

Key Partners

- CMU - Open Learning Initiative
- Los Angeles USD - East
- NYS Master Teachers
- ASU Preparatory
- Chief Science Officers Program
- American Geophysical Union
- ASU Teachers College

246 Survey Responses from Subject Matter Experts

Understanding External SMEs

AUDIENCE QUOTE: “It is very important that young children (K–12) see people who look like them in fields that they might aspire to. In some cases, seeing someone do a job that they know nothing about is tremendously impactful. This is 100% my biggest and most important reason for doing outreach events.”

—SME Survey Participant
Key 2021 Accomplishments

• Needs assessment survey responses received from 246 NASA experts or early career scientists
• 105 NASA experts or early career scientists opted to learn more
• Established project infrastructure to support activities
• Planned conference activities for AGU 2021 and AAS 2022

Key Partner

• American Geophysical Union (AGU)

A representation of the anticipated pathways for newly engaged SMEs. The center of the diagram (yellow) depicts the most active members, including the project team, SciAct teams, and highly engaged SME leaders. On the periphery (blue) are SMEs with no knowledge of or connection to the SciAct.

SCoPE project activities are intended to bring SMEs along a pathway from unconnected to aware of SCoPE opportunities, to investigating those opportunities, to learning how to engage in education, to contributing to the SciAct in a small way, to co-creating education products with a SciAct team, and, for a small number, to leading in the community. It is expected that some SMEs will also exit the community over time, but this diagram is intended to show only the incoming pathway.
NASA’s Neurodiversity Network

NASA’s Neurodiversity Network (N3) is providing a pathway to NASA participation and STEM employment for neurodiverse learners, with a focus on those on the autism spectrum.
Key 2021 Accomplishments

- Piloted remote astronomy activities at four autism-focused high schools, then revised using co-design process
- Sixteen summer interns were supported by 14 SME mentors, engaging in research projects in Astronomy, Earth Science, Heliophysics, Mathematics, and Rocketry/Payloads.
- Prototype museum activities tested
- Mentor training in best practices for working with autistic learners

Olivia Wheeler wrote python code to gather data from different telescopes for multi-wavelength analysis. SME: Prof. Angela Speck

Benjamin Snyder built the Rising Data rocket and payload. SME: Tony Alcocer and Kevin John

Kian Miranda-Rodriguez studied over 450 flares and found 109 white light flares. SME: Dr. Juan Carlos Oliveros Martinez

Trevor Hoffman is devising a method to use space-filling Hilbert curves to extend the Kolmogorov-Smirnov test to more than one dimension. SME: Dr. J. Garrett Jernigan

NASA's Universe of Learning

NASA's Universe of Learning is a unique partnership providing direct access to intriguing discoveries, scientific data, and experts that span the full range of NASA’s astrophysics missions. We combine these assets with best practices in learning to create resources ranging from captivating videos that motivate science learning to activities exploring telescope data that strengthen science identity. We partner with organizations nationwide to incorporate resources into community programs and professional learning experiences. Subject matter experts ensure the scientific integrity of our work, provide a human connection to science through presentations and interviews, help organizations develop exhibits and science programming, and more.

**AUDIENCE QUOTE:** “Our [Girls STEAM Ahead with NASA] participants (girls aged 13–14) responded very well to the pixels to image activity and processing images with MicroObservatory. I think these activities helped them see and appreciate the connection between STEM disciplines and humanities disciplines and that they can be creative and interpretive with STEM learning.”
Selected Key 2021 Accomplishments

**Programmatic**
- Increased the rigor of our work by creating logic models for each project that were aligned to the SciAct mid-level objectives and used to inform project planning
- Established and formalized three infrastructure projects to provide key assets across the program: NASA Datasets, AstroPix, and Multimedia
- Developed final three content themes: Structure & Composition of the Universe, Extreme Physics & Phenomena, Cosmic Mysteries

**SME Engagement**
- Supported filling hundreds of SME requests, including the Webb Community Events (see front page), using the SME database that includes 644 SMEs

**NASA Assets in STEM Learning**
- Partnered with NASA and the Webb mission to increase reach and impact of nation-wide Webb Community Events held in conjunction with Webb launch
- Shared the science of the universe with educators through professional development experiences in Science Briefings and the Informal Learning Network’s Cosmic Conversations, and released the

JWST Teachable Moment with JWST-related learning activities

**Broadening Participation**
- Established Diversity Liaison role and a DEIA Working Group to support team in connecting and collaborating with underserved communities
- Increased attention to diverse audiences with release of sonifications of six astronomy objects, two cultural connection-focused ViewSpace videos, and selection of 10 new teams from underserved areas for the 2021–2022 Arizona Science Olympiad

**Key Partners**
- Association of Science-Technology Centers
- National Girls Collaborative Project
- National Science Olympiad
- Smithsonian Affiliations
- SAO Science Education Department

NASA® My Library

A National Earth and Space Science Initiative that connects NASA, public libraries, and their communities. NASA® My Library 2.0 prepares library staff to facilitate programs related to high profile NASA events such as the James Webb launch and First Image, Earth Day, and the Collaborative Summer Learning Program Theme “Oceans of Possibilities.” Supports for library staff include training, virtual toolkits, patron badging, subject matter expert support, and resources from other SciAct programs.

By the NUMBERS
- 60 Partner Libraries
- 8000+ Member CoP
- 5 University Partners
- 10 State Library Advisors
- 6 NASA® My Library 1.0 Mentors

AUDIENCE QUOTE: “The take and make kits you sent to our library many months back were definitely a big hit. Our local boys and girls club had to be closed frequently last Spring so we provided the kits to children who came into our library. We were able to remain open but could not have classes or programs so the take and make kits were very popular. They helped us bridge the gap between being “kind of” open to now being fully open.”
—Carolyn Cook, Commerce Public Library
Key 2021 Accomplishments

- 60 Partner libraries recruited and onboarded
- Recruited and onboarded 6 mentors & 10 State Library advisors to advise on project activities and mentor new partner libraries
- 5 Universities onboarded to provide near-peer SMEs for Partner Libraries
- Initiated Beanstack patron reading / activities app for JWST Challenge
- JWST virtual toolkit and 4 STEAM Strategies videos produced for librarians
- 3 JWST webinars conducted for library staff
- American Library Association’s (ALA) ALA Connect platform networks libraries with mentors, experts, and team members
- Community Engagement Kit for librarians developed and released
- External evaluator administered baseline library survey

Yuma County Library flyer
Native Earth | Native Sky (NENS) co-creates culturally-relevant earth and sky STEM curriculum with three Native American Nations in Oklahoma. We interweave stories, language, and culture into formal classroom earth and space curriculum in an effort to increase Native American participation in STEM careers. Year 1 is focused on Choctaw Nation of Oklahoma.

**By the NUMBERS:**
- 1 University
- 3 Nations
- 12 Choctaw Board of Advisors
- 1,000+ student/100 teacher potential reach in Choctaw Nation by 2023

**AUDIENCE QUOTE:** "Together, we have formed an advisory board of Choctaw elders, first speakers, and CNO representatives from Advanced Technologies, Arts, Cultural Center, Education, Historic Preservation, and Language… A high level of respect was demonstrated throughout [the first meeting] — respect for stories, knowledge, high caliber programs already in place, for one another, and for process as well as awareness that some stories that are sacred in nature may not be shared. This was appreciated by all!"

—Audrey Jacob, Director of Art, Choctaw Nation of OK Cultural Center
Key 2021 Accomplishments

NENS focused on relationship building and story (data) collection with the Choctaw Nation in Year 1. Even though the pandemic delayed our IRB and prevented us from starting interviews with elders, we collected many stories from Choctaw adult and children’s literature to begin working on curriculum. We have built an example lesson from *Crossing Bok Chitto* by Tim Tingle. We held our first Board of Advisors meeting with Choctaw Nation and visited the new Cultural Center. We also continued relationship building with Chickasaw Nation and Cherokee Nation.

Key Partners

- Choctaw Nation of OK
- Chickasaw Nation of OK
- Cherokee Nation of OK
- NASA Science Activation and SMD
- OSU Center for Sovereign Nations
- Boeing
Navigating the Path of Totality supports a national public education program using the two upcoming solar eclipses, the annular eclipse in 2023 and the total eclipse in 2024, as platforms for developing continued public interest, engagement, and education focused on NASA Heliophysics and associated STEM content. This project provides ongoing opportunities to feature SMEs and NASA’s Heliophysics Observatory System of missions like MMS, Solar Orbiter, and Parker Solar Probe. A specific audience focus includes K–12 educators, Spanish language speakers and Native Americans, specifically Navajo.

**AUDIENCE AGE**

5+

**LEARNING CONTEXTS**

- Digital Learning
- Informal/Out of School
- Home/Family
- Formal Education

**AUDIENCE QUOTE:** “The Spanish feed was quite interesting and related the eclipse to the human experience and grounded it in some historical and local context.”

—2019 reviewer
Key 2021 Accomplishments

- Preliminary location scouting for production
- Review of previous eclipse productions and evaluations
- Initial development of “Road to the Eclipse” storyline
- Initial development of K–12 classroom activities
- Presentation of Latino audience engagement strategies to SciAct
- Partnerships established with Indigenous Education Institute, NASA HEAT SciAct project, and American Astronomical Society

Key Partners

- Indigenous Education Institute
- Edu, Inc.
- NASA SciAct HEAT
- Parker Solar Probe

Northwest Earth and Space Science Pathway

NESSP works to create a NASA presence in the Northwest United States and beyond with outreach activities, educator professional development, and student challenge activities based on NASA missions. We aim to reach underrepresented minorities, girls, and students in rural areas to increase STEM interest and self-efficacy.

Total Students Reached: 11,600

ROADS Curriculum Student Composition

AUDIENCE QUOTE: “My students have always been really interested in space, and I’ve had very little for them to participate in that’s really a hands-on activity that is actually mimicking a real-life experience. . . . And with middle school kids, it’s got to be interesting or applicable or they’re going to not do it at all. So, I’m just really excited that it’s something that I think my kids will be really engaged in.”
Key 2021 Accomplishments

- Completion of ROADS on Asteroids
- Evaluation of the first ROADS Companion Course demonstrating impact on students and educators
- Launch of new Companion Course for ROADS on Icy Worlds
- Virtual Outreach and STEM Academies, with activities resuming in person this fall
- Culturally relevant curriculum implementation from UW Riverways
- Implemented five two-day educator professional development sessions with positive evaluation results
- Continued and new relationships with rural schools, and Native Communities including Quileute Tribal School, Blackfeet Nation, and Crow Tribe.

NISE Network SEISE

The National Informal STEM Education Network (NISE Network) Space and Informal STEM Education (SEISE) project leverages a robust network of hundreds of museums across the United States to advance the NASA Science Mission Directorate vision for education by engaging public audiences nationwide in informal and lifelong learning related to fundamental STEM concepts. The Network utilizes NASA SMEs, SMD assets and data, and existing educational products and online portals to create compelling learning experiences that share the story, science, and adventure of NASA’s scientific explorations of planet Earth, the solar system, and the universe beyond.

AUDIENCE QUOTE: “The pandemic has broadened participation with our NISE kits. The NISE Network kits have allowed us to stay engaged with the public while providing hands-on science activities to the public during the pandemic.”

—Dafne Garduno, Gateway Science Museum, Chico, CA
Key 2021 Accomplishments

- Supporting of 350 museum partners using the four Explore Science: Earth & Space Toolkits (2017–2020) and the Sun, Earth, Universe exhibition to reach their audiences with NASA SMD research, mission, and accomplishments
- Launching the new Earth & Space Project-Based Professional Learning Community to support 100 leveraging partner museums making Earth & Space science relevant and inclusive for their local communities across the U.S. through project-based professional development
- Completed 3 new guides & tools for museum partners: Working with STEM Experts; Earth and Space Learning Framework; Earth and Space Content Framework
- Coordinating museums’ preparation and responses to important NASA missions events (Perseverance Rover landing and James Webb Space Telescope launch), celestial events (June Solar Eclipse), and celebrations (Earth Day) through new web resource collections, online workshops, and Explore Science: Earth & Space Toolkit suggestions

Smoky Mountains STEM Collaborative

The Smoky Mountains STEM Collaborative is a STEM education ecosystem project serving learners in the southern Appalachians of western North Carolina. We work with an under-represented and diverse population, including enrolled members of the Eastern Band of the Cherokee Indian and many first generation college students. Our mission is to expand and engage the region in a cohesive, learner-centered STEM ecosystem that leverages Subject Matter Experts (SME’s) and science centers to achieve NASA’s mission to help learners of all ages “do” science in their own communities.

SciAct STEM Ecosystems works across the SciAct portfolio to strengthen collaborations and provide professional development and resources related to principles and practices of STEM learning ecosystems. The project is identifying strategies and approaches that SciAct teams and partners can use to broaden participation and connect learners with NASA SMEs and unique assets.

**PARTICIPANT QUOTE:** “The building of the ecosystem is really about building the connections [...] to reach these big goals that we have.”
Key 2021 Accomplishments

Our Year 1 foundational work is organized into three inquiry cycles:

- definition and function of learning ecosystems;
- broadening participation and centering equity; and
- creating opportunities for authentic STEM engagement.

We are integrating information from published documents, case studies, and interviews with experts and ecosystem partners.

Key Partners

- NASA Science Activation
- Arizona State University
- University of Alaska Fairbanks
- Southwestern Community College (NC)
- Museum of Science (Boston)
- STEM Ecosystems Network
- National Informal STEM Education Network
The STEM Enhancement in Earth Science (SEES) project addresses the national need to increase the number of high school students, particularly under-represented minorities and those from underserved areas, that will pursue STEM college degrees. In 2020–21, we partnered with institutions, organizations, and Science Activation partners to identify NASA missions, data from NASA’s fleet of earth observing satellites, mission planning, and Citizen Science projects as a catalyst for the virtual high school intern program.

The interns analyze and visualize data, learn about Careers from Subject Matter Experts, explore Career Choices from University experts, and conduct virtual tours of NASA facilities. Content knowledge, coupled with hands-on experiences, allows the intern to gain experience in authentic research through field investigation and data analysis.

“IQ/SEES provides the whole package: the ability to work through a real-life science/engineering problem with a team of like-minded individuals who each bring unique perspectives and abilities to bear. There is no coat-tail riding—everyone is expected to dig deep and to contribute. Students thrive in such an environment.”
THE SCIENCE ACTIVATION PROJECT TEAMS

Key 2021 Accomplishments

1130 applications/760 completed
- Selected 82 for traditional projects
- 117 for GLOBE Earth System Explorers
- 71 for Non-traditional Projects

Former SEES Intern Lauren Rodriguez (utexas.edu): What made you decide to pursue an aerospace engineering degree?

“The summer before senior year in high school, I participated in the SEES high school internship program under the Texas Space Grant Consortium. I was mentored and given the opportunity to learn about careers and education in aerospace engineering. My team’s project focused on creating a concept design for a CubeSat and I found that aerospace engineering was likely my best fit major. By the end of that program, I had found enough specific interest in aerospace engineering and the endless room for innovation that I couldn’t envision myself anywhere else.”

SEES Emergency Preparedness poster, presented as 1 of 27 teams presenting at AGU Bright StaRS.

Anna MacLennan, a former STEM Enhancement in Earth Science Intern (SEES Class of 2019), was named one of The Mars Generation’s 24 Under 24 Leaders and Innovators in STEAM and Space Award Winners for 2020.

Improve U.S. Science Literacy

Advance National Education Goals

Leverage Through Partnerships

Evaluation

Partnering Opportunities

SCIENCE ACTIVATION DESIRED OUTCOME/VISION STATEMENT:

To further enable NASA science experts and content into the learning environment more effectively and efficiently with learners of all ages.

OBJECTIVES: Mid Level Objectives:

Enable STEM Education

Inspire participants’ interest in STEM and the development of their identities as science learners.

Provide opportunities for participants to engage with the disciplinary content related to NASA science and engineering.

Increase number of and frequency with which NASA SMD assets are used by learners across the US.

Improve U.S. Scientific Literacy

Advance participants’ understanding of the process of science using NASA SMD assets.

Advance National Education Goals

Increase participation in learner-centered experiences based on NASA SMD assets.

Increase the diversity of participants reached by Science Activation through intentional, inclusive programming.

Engage participants in learning experiences that promote development of skills for STEM careers.

Leverage Efforts through Partnerships

Leverage internal mechanisms to support sharing and learning across the Science Activation portfolio.

Utilize external partners to leverage reach and effectiveness of the Science Activation portfolio.

NASA SMD assets = science content and data, space and airborne platforms, and scientific and technical personnel.
Science Activation Logic Model

At the portfolio level, an integrated Logic Model has served learners effectively, especially during the pandemic, by allowing a nimble and adaptive approach to meeting the needs of our audiences.
### Logic Model Legend

Key terms, color codes, and texture patterns are defined and detailed below.

### Components of Collective Impact

**Translucent components highlight alignment between the Collective Impact model and SciAct components.**

### Common Agenda

A shared vision for change, one that includes a common understanding of the problem and a joint approach to solving it through agreed upon actions.

### Shared Measurement System

Agreement on the ways successes will be measured and reported.

### Mutually Reinforcing Activities

A diverse group of stakeholders working together by encouraging each participant to undertake the specific set of activities at which it excels in a way that supports and is coordinated with the actions of others.

### Continuous Communication

Regular meetings to allow stakeholders to build experience with one another, and recognize and appreciate the common motivation behind their different efforts.

### Backbone Support Organizations

Separate, dedicated staff to plan, manage, and support the initiative through ongoing facilitation, technology and communications support, data collection and reporting, and handling logistical and administrative details.

### Needs-Based Inputs

- Science and Engineering Content/Data
- NASA Infrastructure Programs
- Participatory and Experiential Opportunities
- Subject Matter Experts (SMEs)

### Activities

- Outreach events/camps/workshops to engage audiences with science content and SMEs
- Audience engagement with lessons or activity based on NASA content
- Educator professional development (informal and K-12)
- Resource development (curriculum, videos, online platforms)
- Project evaluation
- Knowledge-sharing among awardees
- Action groups and communities of practice

### Outputs

- Audience Engagement with STEM experience
- Media products
- Lessons and curriculum
- Digital platforms to engage with data
- Citizen Science opportunities
- Increased dissemination opportunities
- Shared metrics and evaluation data

### Guiding Objectives and Measurable Constructs

<table>
<thead>
<tr>
<th>Objective</th>
<th>Constructs</th>
</tr>
</thead>
<tbody>
<tr>
<td>To advance National Education Goals</td>
<td>STEM interest, STEM identity, Interest in STEM-related careers, Awareness of the range of SciAct activities, generally, Awareness of SciAct activities as distinct or unique from other STEM offerings, Knowledge of science process, Expression of science knowledge, Application of science process, Confidence using STEM Assets in scientific processes, Performance of STEM skills, Confidence using STEM skills, Awareness of STEM skills use as they relate to a profession, Intent to apply STEM skills in a professional setting</td>
</tr>
<tr>
<td>To improve U.S. Scientific Literacy</td>
<td>Awareness of SciAct Resources/ SMD Assets to inform practice, Intent to use SciAct Resources/ SMD Assets in practice</td>
</tr>
<tr>
<td>To leverage Efforts Through Partnerships</td>

### Mid-Level Objectives

- 1a. Inspire participants' interest in STEM and the development of their identities as science learners.
- 1b. Provide opportunities for participants to engage with the disciplinary content related to NASA science and engineering.
- 1c. Increase number of and frequency with which NASA SMD assets are used by learners across the US.
- 2a. Advance participants' understanding of the process of science using NASA SMD assets.
- 2b. Increase the diversity of participants reached by Science Activation through intentional, inclusive programming.
- 3a. Engage participants in learning experiences that promote development of skills for STEM careers.
- 3b. Increase the diversity of participants reached by Science Activation through intentional, inclusive programming.
- 4a. Leverage internal mechanisms to support sharing and learning across the SciAct portfolio.
- 4b. Utilize external partners to leverage reach and effectiveness of the SciAct portfolio.

### Top-Level Objectives

- Enable STEM Education
- Advance National Education Goals
- Improve U.S. Scientific Literacy
- Leverage Efforts Through Partnerships

### Constructs

- Used to organize Portfolio-Level evaluation activities
