

Government Performance and Results Act/ Modernization Act (GPRAMA) Annual Performance Evaluation

- There are three Annual Performance Indicators (APIs) in NASA's FY19 Annual Performance Plan for which progress is to be assessed:
 - API HP-19-1 Demonstrate planned progress in exploring the physical processes in the space environment from the Sun to Earth and throughout the solar system.
 - API HP-19-2 Demonstrate planned progress in advancing understanding of the connections that link the Sun, Earth, and planetary space environments, and the outer reaches of the solar system.
 - API HP-19-3 Demonstrate planned progress in developing the knowledge and capability to detect and predict extreme conditions in space to protect life and society and to safeguard human and robotic explorers beyond Earth.

Guidelines for Science Progress Ratings

Color	Definition
GREEN	Expectations for the research program fully met in context of resources invested.
YELLOW	Some notable or significant shortfalls, but some worthy scientific advancements achieved.
RED	Major disappointments or shortfalls in scientific outcomes, uncompensated by other unusually positive results.
