

PLANETS CAUGHT IN THE
 HORRIFYING GRIP
 OF AN UNDEAD STAR
PSR B1257+12
 PRESENTS

ZOMBIE WORLDS:

POLTERGEIST DRAUGR PHOBETOR

THESE THREE DOOMED WORLDS WERE AMONG THE FIRST AND CREEPIEST TO BE DISCOVERED AS THEY ORBIT AN UNDEAD STAR KNOWN AS A PULSAR. THE CARCASS OF LICH, AS IT'S CALLED, IS THE COLLAPSED CORE OF AN EXPLODED STAR THAT NOW HAS TWIN PULSING BEAMS OF GHASTLY RADIATION AND LIGHT, SPINNING FASTER THAN YOU CAN BLINK, DEVOURING ANYTHING IN THEIR PATH. POLTERGEIST AND ITS NEIGHBORING WORLDS, PHOBETOR AND DRAUGR, ARE CONSUMED WITH THIS CONSTANT RADIATION ATTACK POSSIBLY LIGHTING UP SICKLY IRRADIATED AURORAS. **LIVING BEWARE!** NOTHING BUT THE UNDEAD CAN SUBSIST IN THIS MOST INHOSPITABLE CORNER OF THE GALAXY!

GALAXY OF HORRORS
 exoplanets.nasa.gov

PLANET TYPE
 TERRESTRIAL

Discovered in 1992 and 1994
 Detected using pulsar timing

BASED ON
 REAL SCIENCE

An Arecibo Observatory discovery
