

# NASA Space Weather Program

## Context: Domestic and International Collaboration in Space Weather

Collaboration and coordination is inherent in everything we do and a **strategic goal** (*Strategic Plan being updated currently*) for the NASA Space Weather Program. We've recently added **two new positions within the Space Weather Program** focused on maturing our collaboration with two key partners/sectors in the US: Commercial Liaison (Kelly Korreck and Brad Williams) and DoD Liaison (Reiner Friedel and Jess Calles).

### Shortlist of Current Collaboration/Coordination Forum

- Domestic
  - SWORM; Interagency; focused on programmatic, operations, response, science, measurements, etc.
- International
  - CGMS; Interagency; focused on operational satellite measurements
  - COSPAR; Interagency & Community; focused on science and measurements
  - UN COPUOS; Interagency; focused on science and measurements

### Possible Gaps

- Research-Funding Agencies: Conversations have begun about the need and approach for such coordination
- Users: The ultimate end-users appear to be missing from most of these conversations
